## Drive Through Berms w/Air Wall Sides & Foam Ends

Drive Through Berms with Air Wall Sides and Foam Ends are made from material that is designed to boast low thermal expansion and contraction, capable of performing in all possible environments and climates, and retain their flexibility over time.

They are designed to **withstand demanding secondary containment needs** including oil, chemicals, or any other material hazardous to the environment.

- The foam wall ends allow for convenient drive in/ drive out capability.
- The drive through berm can be manufactured to meet any size requirement or specification.
- These drive through berms are used for something as simple as wheel washing or to contain a variety of hazardous materials.
- Perfect for rapid response and cost effective!

Custom sizes available upon request.
