

Drive Through Berms w/Air Walls

Spill Fast Berm™ Drive Through Berms with air walls are ideal when rapid response and compact storage is the key.

These spill berms can be built in both, **low or high profile** (see pictures on the left). 3" to 6" in height for Drive In / Drive Out for low profile design or high profile design up to 24" height are available.

- Manufactured from a **mini spill containment berm to a up to 10,000 square feet plus** oversized spill berm, these berms with air walls are used by first responders when quick response times are needed.
- To protect the berm against sharp or rough elements on the ground and for **longevity**, a secondary containment **ground cover** is recommended.
- Side walls filled with water, this berm type can also be used for small airplanes and aircrafts.

- Air wall berms are equipped with high **quality pressure relief valves** to protect against over inflation (see picture on the right).
- Cost Effective
- Custom sizes are available upon request.

Drive Through Berms - Technical Specifications

- Drive In / Drive Out without risking damage to air chambers (sizes 3" - 6" only).
- 3" - 24" wall sizes.
- Can be manufactured to meet any size specifications or requirements. & all material types
- High quality pressure relief valves installed.
- Can be filled with air, water, or both.
- Ground covers and tread pads available.

Fabric Selection:

- Heavy duty 22 oz. & 30 oz. PVC or 40 oz urethane.
