

Spill Fast Berm™ Spill Basins are a flexible and efficient means of secondary containment. They can be used to **contain cans, small generators, fuel tanks, pumps, pressure washers, etc.**, and they are an excellent option to minimize hazardous runoff and small leaks.

Our spill basins boast a convenient, **collapsible cube shape** with four separate fiberglass rod supports at the top.

They are easy to store, 4" diameter by 24" when folded and rolled up (for the 2 x 2 x 4 inch version).

The three figures displayed on the left side show the normal, filled and storage sizes of our collapsible spill containment basins.

Benefits:

- Rapid Response time
- Easy to Use
- Cost Effective
- Custom Sizes and Heights Available Upon Request

Spill Containment Basins - Technical Specifications

- Can be filled with water, chemicals, etc
- Can be filled with paint, oil and fuel in the short term
- Easy storage

Fabric Selection (standard):

PVC 22 oz, PVC 30 oz, or Urethane 40 oz
