Anchor System

Anchoring systems are part of our floating boom accessories and include an anchor, rope, chain, and buoy to anchor and stabilize your floating boom during operation. This setup allows anchors to be attached directly to buoy and then to the boom, minimizing the amount of pressure placed on the barrier. Anchoring systems have been used for debris boom, turbidity barriers, and floating booms in moving water conditions.

Perfect for use with:

- Turbidity Curtains
- Silt Curtains
- Debris Booms
- Oil Booms

Anchoring Kits	
Kit Part	Type
Anchor	22 lbs. Fluke Anchor
Rope	1/2" Twisted Nylon
Chain	3/8" Galvanized Steel
Buoy	16" Orange Buoy
