

Pillow Tank Accessories

Pillow Tank Repair Kits

Repair kits are used when a tank has a small tear or hole that needs to be patched. They are best kept on hand in case of an emergency. The kit comes equipped with the same type of material that the tank is made of, scissors, an adhesive, sandpaper, and a roller. Instructions on how the kit should be used for the tank are also included.

Flat Liner or Ground Cloth

To expand the contact time of your tank, having a ground cloth or a liner to put under the tank is ideal. The liner is made to provide cushioning for the tank against abrasive, raw ground. The cloth can cover the tank to protect it from sun damage when stored outside. Flat liners and ground cloths are normally made of vinyl or coated PVC with weight options of 10, 18, 22, and 30 oz. Each liner is customized to fit your tank's size and can also be made for other flexible tanks and berms.

Fittings

A variety of fittings are available to customize a tank for your application. Ball valves, gauges, adapters, bulkhead fittings, manways, and many other types of fittings all can be added to a tank. Fittings are made in a range of sizes and materials to best suit the tank they are needed for. Contact us with your custom specifications.

Spill Berms

Berms are often used as secondary containment for pillow tanks, as well as to keep the tank protected from the ground. They come in standard sizes, and they also accommodate custom styles and applications.
